

## King Cobra Rib Drill

### OVERVIEW

Built tough for coal, stone and concrete.

### FEATURES

#### **NO-KICK-BACK, STEEL, GEARED MOTOR:**

The steel geared air motor is not only energy efficient, but with Rambor's precision engineering, it is also designed to extend the life of the Rib Drill.

**LIGHT WEIGHT:** The Rib Drill weighs only 20 lbs, leaving it light enough for a miner to operate, yet heavy enough to produce 58 ft/lbs of torque.

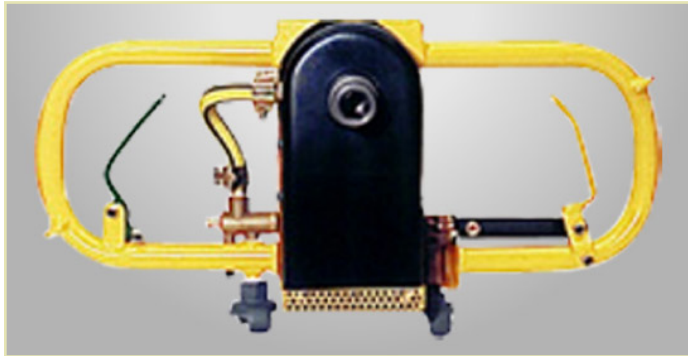

**LOW VELOCITY EXHAUST:** The air velocity is dissipated within 1 foot of the Rib Drill. This prevents dust or other exhaust discharge from affecting the drill operator. The polymer casing prevents exhaust from escaping out the sides and reduces noise.

**NO EXTERNAL COMPONENTS:** The water distribution is internal and delivered through the center of the shaft. This eliminates the need for external components that can be damaged and cause leaks.

**CUSTOMIZED FOR EACH JOB:** The Rib Drill is capable of wet and dry drilling. Adjustments can be made to suit the job at hand.

### ATTACHES TO CHICAGO FITTING

# King Cobra Rib Drill

	King Cobra Rib Drill
<b>Torque range:</b>	58 ft/lbs at stall
<b>RPM range:</b>	Infinitely variable from 0-1400
<b>Air hose size:</b>	1"
<b>Drill chucks:</b>	Manufactured to customer selection
<b>Output</b>	150 ft lbs @ stall
Dimensions	
<b>Height:</b>	9.5"
<b>Width:</b>	21.65"
<b>Depth:</b>	9.45"
<b>Weight:</b>	20 lbs
<b>Noise Level:</b>	105 dBA at operator
