

In-Line Oilers

OVERVIEW

MPI's In-Line Oiler is used to replenish oil in airlines used in pneumatic equipment. The 500 series Oiler is a perfect fit to run on the main hose of our King Cobra Roofbolters and Rib Drills.

The MPI Oilers are low maintenance. MPI recommends refilling the oiler every shift with WBM/MPI Rockdill Oil.

MPI's Oilers have two reservoirs. The upper reservoir holds the oil and the lower reservoir acts as the passageway for the air to enter. The new air/oil mixture exits through the lower reservoir.

Oil amounts may be regulated by the user.

TECHNICAL SPECIFICATIONS

Installation	within 25 feet of pneumatic tool
Minimum Air Flow	30 cfm
Port Sizes	1" Chicago or 1" NPT
Oil Capacity	10.0 fluid ounces
Maximum Working Pressure	250 psi
Air Flow (@ 70 psi)	100 cfm
Weight	4.3 lbs.
Dimensions	10"L x 4"H x 4-1/4"W

MPI Recommends using WBM/MPI Rockdrill Oil for all applications of the In-Line Oilers.

WBM/MPI Rockdrill Oil is available in 1 gallon, 5 gallon and 55 gallon containers.
