

# MPI MINExpo 2008 Recap

September 24-26, 2008

MPI would like to thank everyone, friends, family, partners, clients and future customers who stopped to see us at the show.

We had a tremendous turnout of support. There was much interest in the products on display. Our technicians demonstrated the new MPI Block Splitter. Show attendees always stopped to watch the splitting. The unit generated much interest, specifically with mines using solid block.

The first ever American made Z Drill was on display at the show. MPI purchased the manufacturing rights and patents to make the entire Z Drill family of products.

MPI also had it's Australian partnering company Rambor at the show. Rambor is the manufacturer of the King Cobra product line. Peter Mastalir, Managing Director of Rambor brought his colleague, David Hoff, Managing Director of PPK, Rambor's parent company. Rambor showcased the New Cobra Non-Lube Roofbolter.

We are looking forward to the next MINExpo show, MINExpo 2012.
